

Stationary variable pitch pulleys for V-belts are mainly used in the fan industry. These pulleys allow adjustment to optimum working speed of fans by a simple operation on one pulley only.

Adjustment

Modifications of the pulley diameter must be done when stationary by moving the adjustable flange. Each complete rotation of one of the two disks results in a variation of the pulley diameter. When the required diameter is obtained, tighten the clamp screw on one of the two plates.

To get the same diameter in the two grooves of pulleys range D8000, screw the two mobile flanges on the central flange. Then unscrew the two mobile flanges by the same number of rounds to get the required diameter.
